

# 1 READ ME

The Folder contains the following files:

- [Game Sheet WEB\_public.dta]
- PG post play questionnaire
- The PG game sheet
- CSAE working Paper: *Cooperation and Expectations in Networks: Evidence from a Network Public Good Experiment in Rural India*

[Game Sheet WEB\_public.dta] contains data on the baseline characteristics (such as education, gender, religion, farmer characteristics) of the 765 participants taking part at the public good experiments. It also contains data describing the subjects' behaviour in the game and their understanding of questions.

The questionnaires can be straightforwardly linked with the two datasets. In particular, the variable names corresponds to the question number and sometimes have been renamed, such that the meaning of the variable is straightforward to understand.

Information about the sample, for example basic characteristics can be found in the CSAE working paper: *Cooperation and Expectations in Networks: Evidence from a Network Public Good Experiment in Rural India*.

A detailed description of the experimental design can be found both in the working paper as well as in the file named "The PG game sheet".

If you are interested in obtaining more information on this project, then please contact Stefano Caria, [stefano.caria@economics.ox.ac.uk](mailto:stefano.caria@economics.ox.ac.uk).
